EDUCATION

Johns Hopkins University ***Baltimore, MD***

BS/MSE Computer Science | BS Applied Mathematics & Statistics *Expected:December 2024*

- GPA: 3.89/4.0
- Course Assistant for NLP: Self-supervised Models,, Natural Language Processing, Introduction to Algorithmes, Discrete Mathematics, and Automata and Computation Theory

Work Experience

Center for Language and Speech Processing ***Baltimore, MD***

Research Assistant *May 2023 – Current*

- Creared chatbots which refers to a database for responses.
- Use Combination of Dense / Sparse, and traditional retrievals for best results.
- Obtained metrics for different RAG approaches

Johns Hopkins University ***Baltimore, MD***

Research Assistant *May 2023 – September 2023*

- Created neural network-derived brain perfusion map processing pipeline for model-free CTP images.
- Achieved better loss metrics compared to a recent paper on same dataset.

Republic of Korea Army ***Yanggu, Korea***

Information Systems Maintenance/Operator, Squad Leader *September 2020 – March 2022*

- In charge of receiving and sending sensitive information
- Squad Leader from June of 2021

Nexon Korea ***Pangyo, Korea***

Platform Analyst *June 2020 – August 2020*

- Analyzed game data logs using SQL, Hadoop, and Python
- Distinguished experienced players from the playerbase using machine learning techniques including various clustering methods, random forest, LSTMs, and CNN

PROJECTS

arXiv Reference finder (Hophacks) *September 2023*

- Given a research paper, finds relevant parts from the referenced papers, if the paper is in arXiv.
- Used BM25, crossencoders for similarity search. Used arXiv API calls to download reference data, and regular expression to chunk pdf.
- Awarded second overall price for HopHacks 2023

Custom Transformers *May 2023 – June 2023*

- Created customized transformer layers with non-standard implementations.
- Achieved better loss compared to Huggingface implementation of BERT.

Misc Game Tools(Toys) *June 2020 – Current*

- There are os many things that
- Created an excel sheet for calculating expected cost for equipment upgrades in computer games using markov chain
- Created a small planner which tracks every Johns Hopkins University course information locally.
- Coded Pokemon battle damage calculator & Derived method for type ranking calculation
- Coded Enigma machine and an encryption decoder using Index of Coincidence.

Othello Game *June 2019 – November 2019*

- Developed an Othello game and UI using python and wxpython.
- Implemented AI using minimax with alpha-beta pruning.

SKILLS

Software/Skill set: LaTeX, SQL, Microsoft Office (Excel, PowerPoint, Word, Outlook)
Programming: Python, Pytorch, Huggingface, Java, JavaScript, C, C++
Language: English (fluent), Korean (native)
